

PRESS RELEASE

Pro-Cast Products, Proudly Introduces the ProMASH Barrier

Highland, CA – April 7, 2025 Pro-Cast Products, a leading manufacturer of temporary barrier for over 25 years based in California, proudly announces CalTrans approval of its new ProMASH Barriers. Designed and crash-tested to meet the newest FHWA MASH TL-3 criteria, the ProMASH Barrier delivers superior protection for motorists and construction crews. “We are excited to finally introduce the ProMASH Barrier as part of our mission to continue as the leading manufacturer of temporary barrier in California,” said Warren Taylor, President of Pro-Cast Products.

Key Benefits of the ProMASH Barrier:

- **Superior Crash Performance:** Exceeds FHWA MASH TL-3 standards, offering exceptional impact absorption and reduced deflection for enhanced safety.
- **Enhanced Durability:** When paired with Pro-Cast’s patent-pending spacers, the ProMASH Barrier minimizes damage from impacts, extending its lifespan and reducing replacement costs.
- **Simplified Installation:** Incorporates an enhanced pin-and-loop connection system with a “Safety Pin” design, minimizing injury risks by reducing the likelihood of pinched hands during barrier installation and removal.
- **Cost-Effective and Sustainable:** The ProMASH Barrier’s extended lifespan reduces the need for frequent replacements, offering cost savings for contractors and minimizing environmental impact through less material waste.

The California Department of Transportation (CalTrans) will phase out temporary railing (Type K) by December 31, 2026. The ProMASH barrier is available for immediate purchase across California with locations in Southern California (Highland) and Northern California (Sunol). It reduces crash deflection by approximately 50% compared to other barriers on the market, significantly lowering the risk of severe injuries on construction site crashes. We are actively building inventory to meet demand and currently offer ProMash barriers in 10-foot, 20-foot, and 30-foot lengths.
